(54) TELEVISION DEVICE HAVING MONITOR FUNCTION

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a television device which can omit the installation of equipments that function to guard each monitoring area and also can monitor the abnormality occurring in the monitoring areas without securing the installation places of those equipments.

SOLUTION: This device has a function to receive the signals from an input device, to perform display of images and the output of voices in response to the received signals and also to perform the transmission/reception of data via a telephone circuit and then consists of a control means 30A and a human body detector 70. The means 30A receives the signals from the input device and controls the display of images and the output of voices which are performed in response to the received signals and also controls the transmission/reception of data performed via a telephone circuit. The detector 70 outputs a detection signal to the means 30A when a human body is detected in a detection area.
